

NEEDLE FREE & NON-INVASIVE
DISTRIBUTE TENSION OF CLOSURE
AT-HOME REMOVAL

Successfully closes wounds even on fragile and damaged skin by evenly distributing tension of closure over a wide surface area.

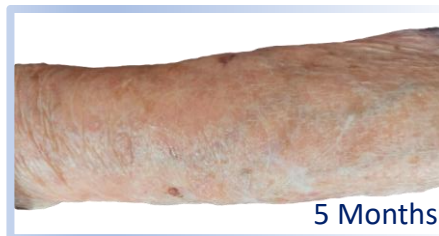

- **Allows true skin closure on fragile skin** – instead of just wrapping.
- **Avoids skin shredding** when skin is not strong enough for sutures.
- **Quick to apply** and helps **eliminate return visits for bloody gauzes**.
- **Streamlines provider's time** – increasing valuable staff efficiency.

DermaClip devices **simplify the process of skin closure**:

- **Mastered in minutes** to deliver **repeatable quality closures**.
- **Eliminates needle trauma** and the **burning sensation of glues**.
- **Easily removed at home** if permitted by provider.
- **No "railroad track" scarring**, enhanced wound healing.

Day 0

5 Months

84-year-old | Traumatic Arm Laceration | Closed @ Home Visit

Day 1

7 Weeks

5 Months

79-year-old | Anticoagulated, Bleeding for 24 Hours | Closed @ Home Visit

Non-Invasive Skin Closure

A Superior Patient Care Solution

DermaClip[®]

Non-Latex

Non-Sensitizing

NO NEEDLES

NO PUNCTURES

NO MESS

DermaClip turns a skill into a process to save time & maximize revenue:

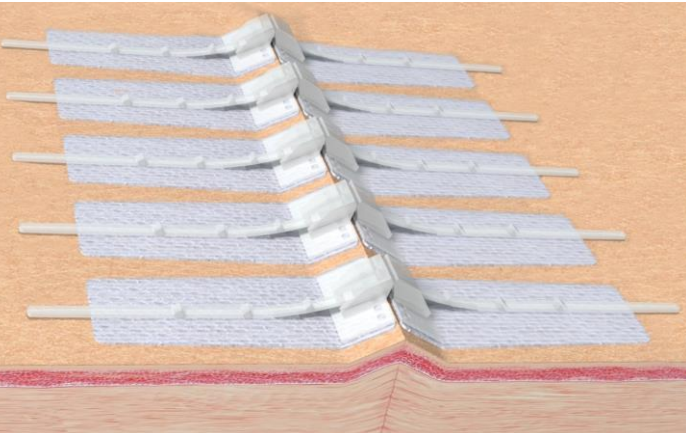

- **Designed to create a quality closure every time** – providing consistency.
- **Save time to increase patient throughput** – see more patients; reduce wait-times.
- **Save money & drive revenue** – shorter procedures leads to increased capacity.

A versatile solution for fragile skinned patients:

- **Department agnostic** – used in the ER, Urgent Care, Doctor's Office, Surgery Suite.
- **Resource agnostic** – usable by any provider to deliver repeatable quality closures.
- **Wound agnostic** – utilized on wounds from the face to the foot.

DermaClip is designed to **maintain wound edge approximation** and **create wound edge eversion**.

- **Designed to dispense tension**
- **Tension-free eversion is the "GOLD STANDARD"** of wound closure¹
